DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 1-11, 13 and 14 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for specific radicals of D and R4 such as disclosed in the specification, does not reasonably provide enablement for the innumerable possible radicals encompassed by D and R4. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention commensurate in scope with these claims. The definition for D encompasses an innumerable number of compounds which are beyond the scope and teaching of the current specification. D would encompass organometallic compounds, innumerable heterocyclic compounds, and various carbocyclic compounds which applicants specification fails to teach how to make. Furthermore, the prior art is not replete with specific radicals D, in such compounds, as to lead one of ordinary skill in the art to make the compounds of formula 1. It is not clear how extreme separation of the carbonyl groups would affect the ability of the compounds to inhibit corrosion or gas hydrates. One of ordinary skill in the art would require undue experimentation to determine how to make the compounds within the scope of formula 1, and determine which of these compounds would be useful in the present invention.

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claim 11 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 11, the formula 3 represents the whole compound, and not the radical D as being claimed.

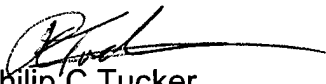

5. With respect to the elected species, such is allowable over the art of record. Although no prior art was found for other species, the scope of D renders the full scope of the claim uncertain. Breuer (US 6261346) appears to be the closest prior art, but differs in not teaching at least a repeating alkylene group.
